

## Comprehensive Server Monitoring

Complementing Bradmark's database toolset, **Surveillance OS™** for UNIX, Linux and Windows operating systems monitors essential server statistics to ensure optimum performance and availability of the operating system and application data.

- Monitor real-time CPU, disk I/O, memory, swap space, file system and process resource utilization
- Obtain more useful data monitoring OS resources used by the data server process
- Detailed-drilldowns quickly identify and help resolve problems that are hindering business objectives
- Generate custom reports from stored performance data

And with integrated support across SAP ASE, IQ, and RepServer, as well as for Oracle, MS-SQL and DB2-UDB (LUW) for heterogeneous database environments, it is easy to see how Bradmark Surveillance enables DBAs to mitigate risk and ensure the efficiency of your organizations digital assets.
