Managing Critical Data Processes To An Expanding Healthcare Membership Pool

With coverage to millions of expected new members, the demand to maintain a real-time snapshot of daily transactions for corporate reporting and analysis becomes increasingly essential. To ensure IT health and efficiency, leading HMOs and managed care companies require automated database monitoring solutions that provide:

- **Uninterrupted System Availability**
- **Proactive Notification & Problem Resolution**
- **Fast (even real-time) Integration of Data between Multiple Systems and Locations**.

Learn why companies like **BCN of Michigan** rely on **Surveillance DB** for essential visibility into simple to complex systems across SAP ASE, IQ and Replication Server database environment.

Also supports Oracle, SQL Server, DB2-LUW for heterogeneous environments - All running on UNIX, Linux or Windows operating systems.

The critical business function of maintaining an operational data store is now managed by a fully automated and carefully monitored replication process.
